- 2:1 wide input voltage range
- 1.5kVDC isolation
- Short circuit protection (SCP; automatic recovery)
- ⊕ Remote On/Off control
- High power density
- Operating temperature:-40°C to +85°C
- RoHS compliance
- Ultra compact SIP package
- EN60950 approved

The 3S8W_1.5RP series series are isolated 3W DC-DC products with 2:1 input voltage and conventional voltage output. The product has a relatively compact SIP plastic package, and features high efficiency, operating temperature of -40°C-+85°C. The smaller size and fine cost design make the converter an ideal solution in communication, instruments, and industrial electronics applications.

Specifications subject to change without notice.

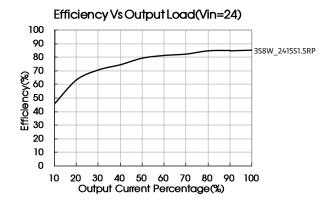

Typical characteristics

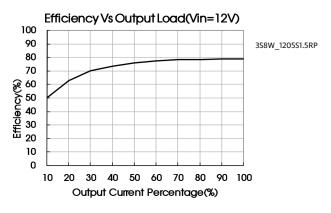

Efficiency

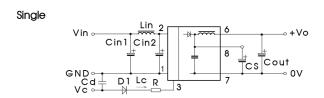

3W - Dual/Single Output - Wide Input - Isolated & Regulated DC-DC Converter

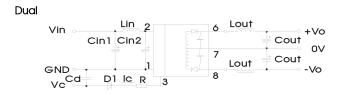

Recommended circuit

All the DC/DC converters of this series are tested according to the recommended circuit before delivery.

If a further decrease of the input and output ripple is required, properly increase the input & output of additional capacitors Cin1, Cin2, Cs and Cout; or select capacitors of low equivalent impedance like

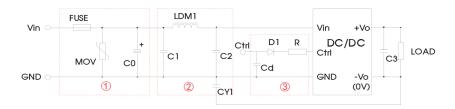

s e r i e s capacitor, etc. Cs is used to reduce ripple. No need to add Cs, if ripple meets the demand. Appropriate filter capacitance shall be chosen, start-up problems may be caused if the capacitance is too large. For each output circuit, under the condition of safe and reliable operation, the max. capacity of its filter capacitor should be lower than the

| Vin | 5VDC&12VDC | 24VDC&48VDC | | | |
|------|-------------|-------------|--|--|--|
| Cin1 | 100µF | 10µF | | | |
| Cin2 | 47µF | 1µF | | | |
| Lin | 4.7µH~12µH | | | | |
| Cs | 10µF~22µF | | | | |
| Cout | 100µF(Typ.) | | | | |
| Lout | 2.2µH~10µH | | | | |
| Cd | 47nF/100V | | | | |

EMC solution-recommended circuit

Recommended external circuit parameters:

| Model | Vin: 5V | Vin: 12V | Vin: 24V | Vin: 48V | | | |
|--------|--|--|----------|----------|--|--|--|
| FUSE | Slow blown f | Slow blown fuses according to the actual input current selections of the clients | | | | | |
| MOV | - | - S14K20 S20K30 | | | | | |
| LDM1 | | 12µН | | | | | |
| C0 | 680µ | 680μF/25V 330μF/50V | | | | | |
| C1, C2 | | 4.7μF/100V | | | | | |
| C3 | Refer to the Cout in recommended circuit | | | | | | |
| CY1 | 1nF/2KV | | | | | | |
| D1 | RB160M-60/1A | | | | | | |
| R | Follows: $R = \frac{V_C - V_D - 1.0}{I_C} - 300$ | | | | | | |
| Cd | $I_{\mathcal{C}}$ -300 | | | | | | |

Note:

- 1. Part ① is used for EMS test, part ② is used for EMI filtering. Choose according to requirements.
- 2. VC is the voltage of the Ctrl end relative to the GND of the input grounding; VD is the positive-going conduction pressure drop of D1; IC is the current flows into the Ctrl end and its value is generally 5-10mA, see part 3® for the peripheral circuit of Ctrl end;
- 3. If there is no recommended parameters, no external component is required.

3S8W_1.5RP series

3W - Dual/Single Output - Wide Input - Isolated & Regulated DC-DC Converter

Ctrl end

The modules are of normal output when the Ctrl end is suspended or of high resistance; the modules turn off when connecting with high level (relative to the input grounding); notice that the current flows into the pin shall be 5 - 10mA, the modules will be permanently damaged if the current exceeds its max. value (20mA in general).

The value of R can be derived as follows:

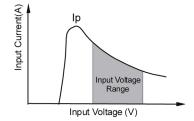

$$R = \frac{V_C - V_D - 1.0}{I_C} - 300$$

For detailed parameters, please refer to EMC solution-recommended circuit in this manual.

Input current

When the electricity is provided by the unstable power supply, please make sure that the range of the output voltage fluctuation and the ripple voltage of the power supply do not exceed the indicators of the modules. Input current of power supply should afford the flash startup current of this kind of DC/DC module.

Generally: Vin= 5V series lave = 1296mA Vin=12V series lave = 631mA Vin=24V series lave = 363mA Vin=48V series lave =157mA

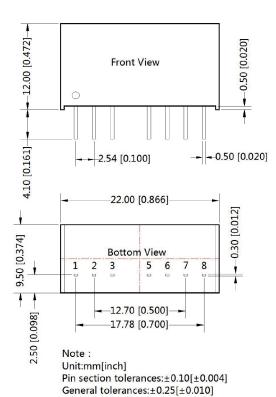

Output load requirements

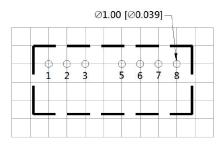

When using, the minimum load of the module output should not be less than 5% of the nominal load. In order to meet the performance parameters of this datasheet, please connect a 5% dummy load in parallel at the output end, the dummy load is generally a resistor, please

note that the resistor needs to be used in derating.

Mechanical dimensions

Note: Grid 2.54*2.54mm

| Pin-Out | | | | |
|---------|--------|------|--|--|

| 7 | OV | 0V | | |
| 8 | CS | -Vo | | |

NC: No connection

Note:

- 1. Min. load shouldn't be less than 5%, otherwise ripple maybe increased dramatically. If the product operates under min. load, it may not be guaranteed to meet all specifications listed. Operation under minimum load will not damage the converter.
- 2. Recommended Dual output models unbalanced load is ≤±5%, if the product operates >±5%, it may not be guaranteed to meet all specifications listed. Please contact our technical support for more details.
- 3. Max. Capacitive Load is tested at input voltage range and full load.
- 4. All specifications measured at Ta = 25°C, humidity <75%, nominal input voltage and rated output load unless otherwise specified.
- 5. In this datasheet, all test methods are based on our corporate standards.
- 6. All characteristics are for listed models, and non-standard models may perform differently. Please contact our technical support for more details.
- 7. Please contact our technical support for any specific requirement.
- 8. Specifications of this product are subject to changes without prior notice.
