The QT8B1_3UP series is specially designed for applications where an isolated voltage is required in a distributed power supply system.

These products apply to:

- 1) Where the voltage of the input power supply is fixed (Voltage variation $\leq \pm 10\%$)
- 2) Where isolation is necessary between input and output (Isolation voltage $\leq 3000\text{VDC}$)
- 3) Where the regulation of the output voltage and the output ripple noise are not demanding.

Such as: pure digital circuits, low frequency analog circuits, and relay-driven circuits.
